

**Janice Bach M.S., CGC** currently serves as State Genetics Coordinator and Manager of the Genomics and Genetic Disorders Section within the Michigan Department of Community Health. She has worked for more than 15 years as a genetic counselor in pediatric settings, has led the development of Michigan's state genetics plan, and has served as project director for federal grants and cooperative agreements relating to birth defects, newborn screening and genetic service delivery, and genomics. Under her leadership, Michigan's public health genetics program has expanded to encompass population-based genomics issues throughout the life cycle, including birth defects prevention, genetic literacy, innovative uses of data for public health assessment, and the integration of genomics into chronic disease programs. She earned a bachelor's degree from Oberlin College and a Master's degree in Human Genetics from the University of Michigan.
